There are many variables that contribute to vibration in “mudder” tires. Before installing FLEXX, please consider the following sources of vibration, including but not limited to: Proper drive line angle, tire pressure, presence of a lift kit, tire run-out, wheel run-out, extreme side wall flex, tread ripple, and/or a lug pattern that may cause acoustical vibration. These factors, and others, will play a role in the vibration of the vehicle and FLEXX will not correct these conditions. We cannot guarantee the elimination of all vibration sources.

COMMERCIAL LIGHT TRUCK TIRES

The following tire sizes apply only to light truck tires (must be LT rated) for commercial vehicles with dual wheel positions and a 10,000 GVW rating (Class 3) or higher. For light truck tires available in a heavy duty ply/load rating (10+), use the next FLEXX package size up (additional 2 oz). Example: A 215/75 R 17.5 light truck tire requires an E package (4 oz.) for normal application. For heavy duty rated tires a D package (6 oz.) is recommended.
